FIRE ACTIVITY

INLAND REGION (Continued)

Carr, Vegetation Fire, Shasta County (Continued)

Critical Infrastructure

- Redding Electric – Residents without power 650
- Pacific Gas & Electric – Residents without power 3,886 and 502 without gas
- Power Plant Operations:
 - Shasta, Keswick and Trinity power plants are back up and running. Trinity power plant is currently the sole source of electricity for the county. This is a temporary arrangement until the grid is checked and normal electrical distribution resumes. All operating power plants are being staffed 24/7. There is no threat or concern to infrastructure at this time. Additional updates will be provided as information becomes available.
 - Spring Creek Detention Dam: Spring Creek Dam impounds toxic seepage from the Iron Mountain Mine Superfund Cleanup Site upstream on Boulder Creek. The Iron Mountain Mine has a 7 million gallon waste impoundment that has plenty of storage capacity left with no concern about imminent releases from Iron Mountain. Spring Creek Detention Dam is nearly empty with most of its storage capacity available. Additionally, BOR has a large amount of water stored for dilution purposes should any waste enter the Sacramento River. There is no concern about either Iron Mountain Mine Superfund Cleanup Site or Spring Creek Detention Dam posing a threat to public safety, environment or water quality.
- Amtrak Service
 - The Coast Starlight trains which operates between Los Angeles and Seattle have been amended; northbound trains are operating Los Angeles to Sacramento only, and southbound trains are operating Seattle to Klamath Falls, OR only, no alternate transportation being provided.
- Iron Mountain Superfund Site
 - Iron Mountain is being addressed for restoration
 - Site is securing fuel for generators for tomorrow.
 - Private fire crew arriving today.
 - Coordinating power restoration crews with CUEA.
 - Concerned about fire status in area surrounding site.
 - Considering restarting treatment plant.
 - Sacramento River is currently not in danger from Acid Mine Drainage
- City of Redding – Water Treatment Plant
 - A potential threat was identified at the Clear Creek CSD water treatment plant due to surrounding fire. There is 1 full one-ton cylinder and 2 empty one-ton cylinders that contain chlorine gas.
 - Per Cal EPA, Clear Creek Community Services District inspected the site and the plant remains fully operational. Water quality remains good and remote communications have been re-established. There is no danger to the plant or chlorine tanks on site

FIRE ACTIVITY

WEATHER OF CONCERN

Weather of Concern

Northern California:

- Weekend heat continues for interior Northern California.
- Triple digit high temperatures for many areas along with local smoky conditions
- Critical fire weather conditions are expected to continue this afternoon and evening as well as tomorrow afternoon and evening for portions of far northern California.

Southern California:

- Dangerous heat will likely continue this weekend, focused across interior areas such as the mountains, Antelope Valley and interior valleys of San Louis Obispo and Santa Barbara counties.
- The most critical fire weather conditions are likely across southern Santa Barbara county, due to some gusty northerly winds combining with the hot and dry conditions.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Hot and Dry with Poor Overnight relative humidity (RH) Recovery Inland from the Coast through Tuesday

SW-NW Gusts 20-30 mph through Coast Range Gaps and Passes into Western Sacramento Valley from Late Afternoon Until Late Evening Daily through Tuesday

Strong high pressure will continue producing hot and dry conditions throughout Northern California through Tuesday, except along the immediate coast where the marine layer will keep conditions cool and humid. Winds aloft are light out of the SW, but at the surface local winds associated with the thermal low and the sea breeze are making it difficult to control ongoing wildfires. Each day through Tuesday from the late afternoon hours until late evening SW-NW winds will gust to 20-30 mph through the gaps and passes in the coastal mountains and into the west side of the Sacramento Valley. Inland overnight RH recovery will only be to 25-40%, and recovery in the windy areas will be the worst. These winds gradually weaken from midnight until sunrise, then start up again in the afternoon. Inland temperatures will peak at 8-12 degrees above normal with minimum RH 5-15% in the drier areas.

On Monday and Tuesday the high will weaken somewhat so temperatures may drop a couple degrees and the marine layer will be deeper and move a bit farther inland, but winds might increase by a few mph. In general, though, the differences from this weekend to Mon/Tues will hardly be noticeable. On Wednesday the high will weaken as a low pressure trough in the Pacific NW pushes south. A stronger westerly flow can be expected, along with higher humidity, cooler temperatures and better overnight RH recovery through Friday and possibly beyond.

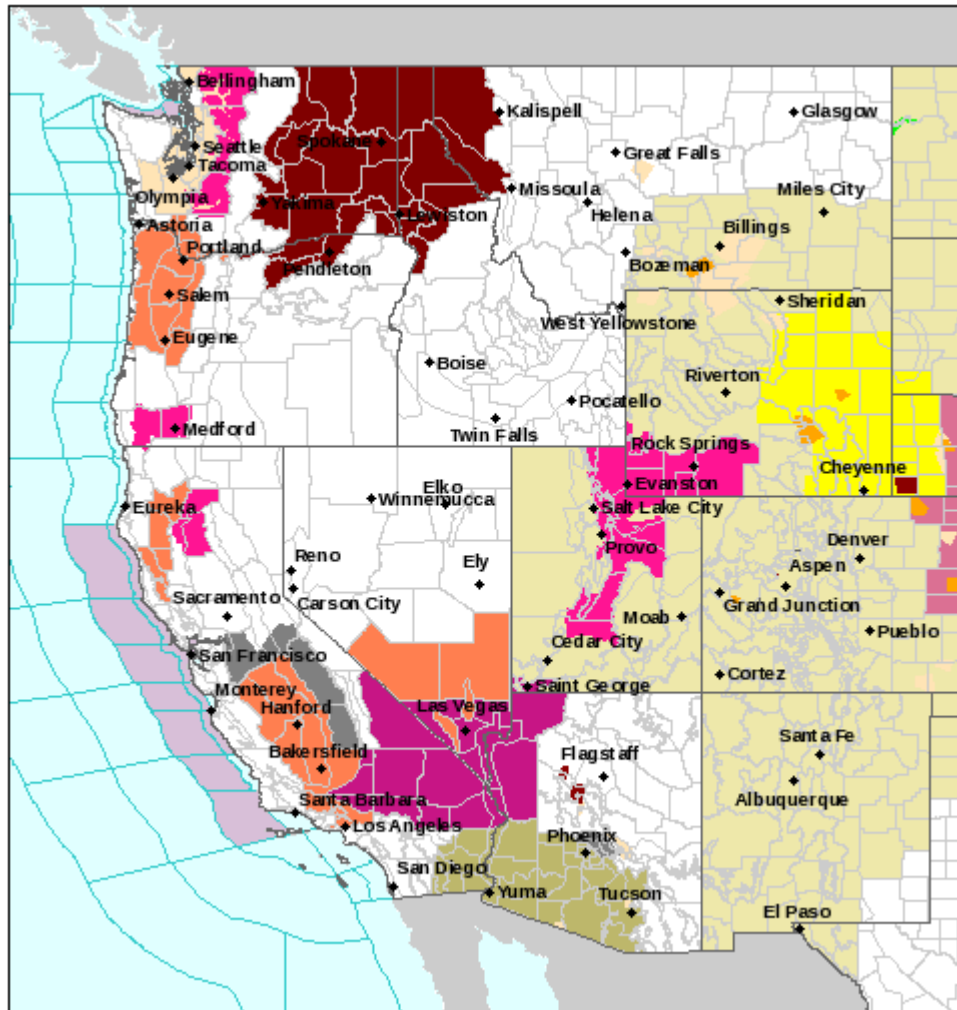

SOUTHERN CALIFORNIA

Thunderstorm activity increasing across the mountains and deserts Sunday and Monday

Continue hot across the inland areas through the middle of next week

While temperatures will lower slightly over the next day or two, daytime highs will still range from 95 to 105 across the inland areas with 80s to mid-90s in the mountains below 6,000 feet. Isolated thunderstorms will be possible over the Sierra as well as across the mountains and deserts south and east of I-15 today, with increasing chances over these same areas Sunday and Monday. Meanwhile along the coast, night and morning low clouds and fog will be prevalent with moderate onshore flow each afternoon. Winds will be variable 8 to 15 mph except stronger across the deserts and near thunderstorms. Slightly warmer and drier weather is expected through the early to middle part of next week with thunderstorm chances slowly decreasing. By late next week, the area of high pressure over Arizona will begin to shift eastward, allowing for a drier westerly flow to develop over the local region with daytime highs lowering to near normal levels by then.
